SOLAR ENERGY SYSTEM

2023- 2024

The Institution has implemented solar energy systems as part of its commitment to sustainable energy practices. A rooftop solar power plant with a capacity of **15 kWp** has been installed, generating renewable energy to meet a significant portion of the campus's electricity requirements. This initiative reduces the institution's carbon footprint, promotes energy conservation, and serves as a model for green campus development. Additionally, awareness programs and workshops on renewable energy technologies are regularly conducted to educate students and the community about the benefits of solar energy.
